Raw beauty

MAJAKIVI

Ancient hills and modern architecture.
Sunny walkways and frozen house fronts.
Strength and sensibility.
Roughness and beauty.

Alta Quartzite is all this and much more.
You will find it all over the world, as tiles,
paving facades, fireplaces, blendings, walls,
pedestrian areas, walkways, swimming
pools, steps and stairs.

Let yourself be inspired!

Private cottage, Fitjar, Norway

Hard work can move mountains

Quartzite is the bedrock of Alta, in the north of Norway. We harvest it in the mountains before cutting and shaping it with care and respect. Each stone is unique and ever lasting – as a piece of art. Alta Quartzite is well known worldwide for its strength and quality. Today, our products are just as attractive for interior as exterior use, but it was the manufacture of roofing tiles that set off the quartzite industry in Alta, several generations ago.

The Bergen fish market, Norway

Alta Quartzite is durable and unchangeable. Should you need to extend a walkway, roof or wall, you will find that the new quartzite has exactly the same colour and texture as the old one.

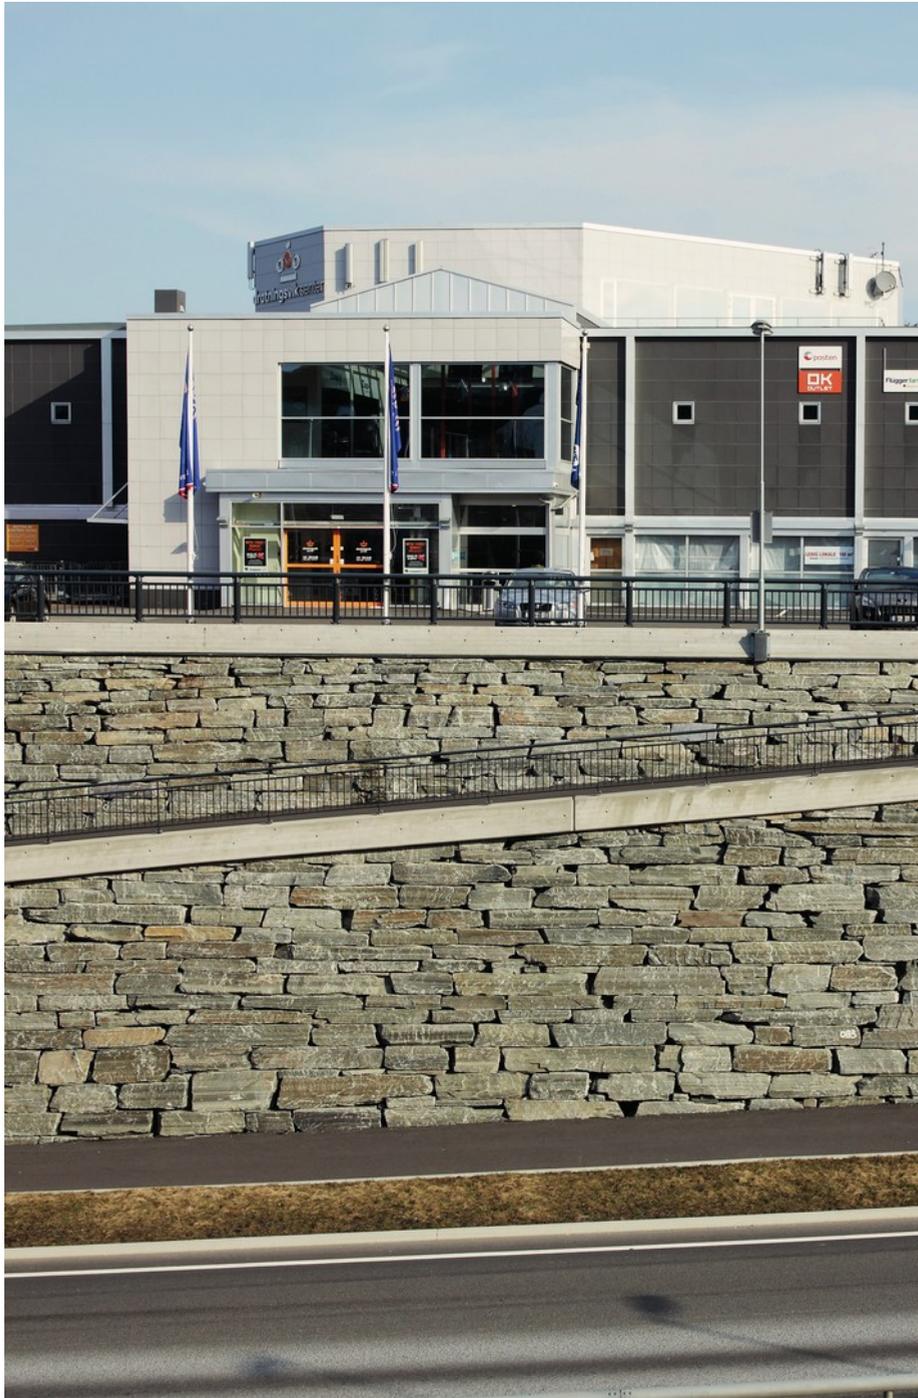

**The roof is the fifth facade of the house,
and maybe the most important one.**

Ålesund, Norway

Ny Krohnborg School, Bergen, Norway >

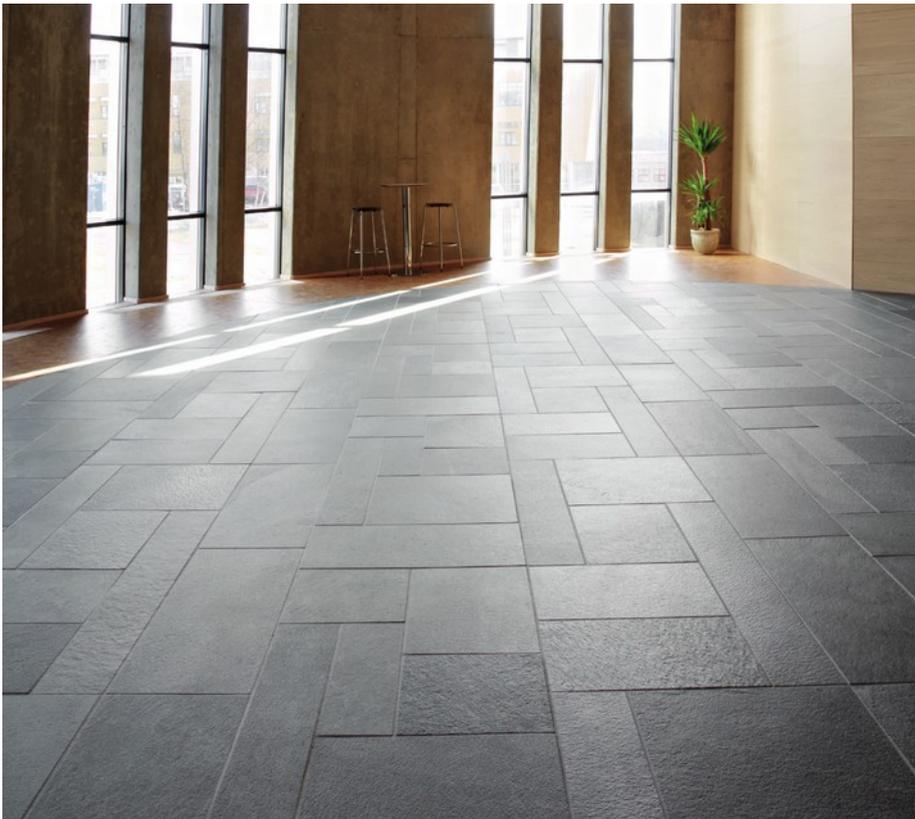

Boston. Beijing. Barcelona. Bergen.
For centuries, Alta Quartzite has been utilized as a building material in Norway, and it soon became sought after in the rest of the world as well. Today, a third of our quartzite is exported, and you will find it on traditional roofs in Italy's Aosta Valley, in Dutch train stations and along Barcelona's beachfront.

Canary Wharf, London, UK
< Drotningstov, Bergen, Norway

Alta Quartzite is not a result of product development or industrial production. Using traditional craft and knowledge, we gather it from the mountains in its original form, following the natural layers of the quartzite. Then we cut each stone individually, so you will have your own piece of our mountains, to look at, to touch and to walk on.

**Perfect complements.
When combined with other materials,
Alta Quartzite is at its best.**

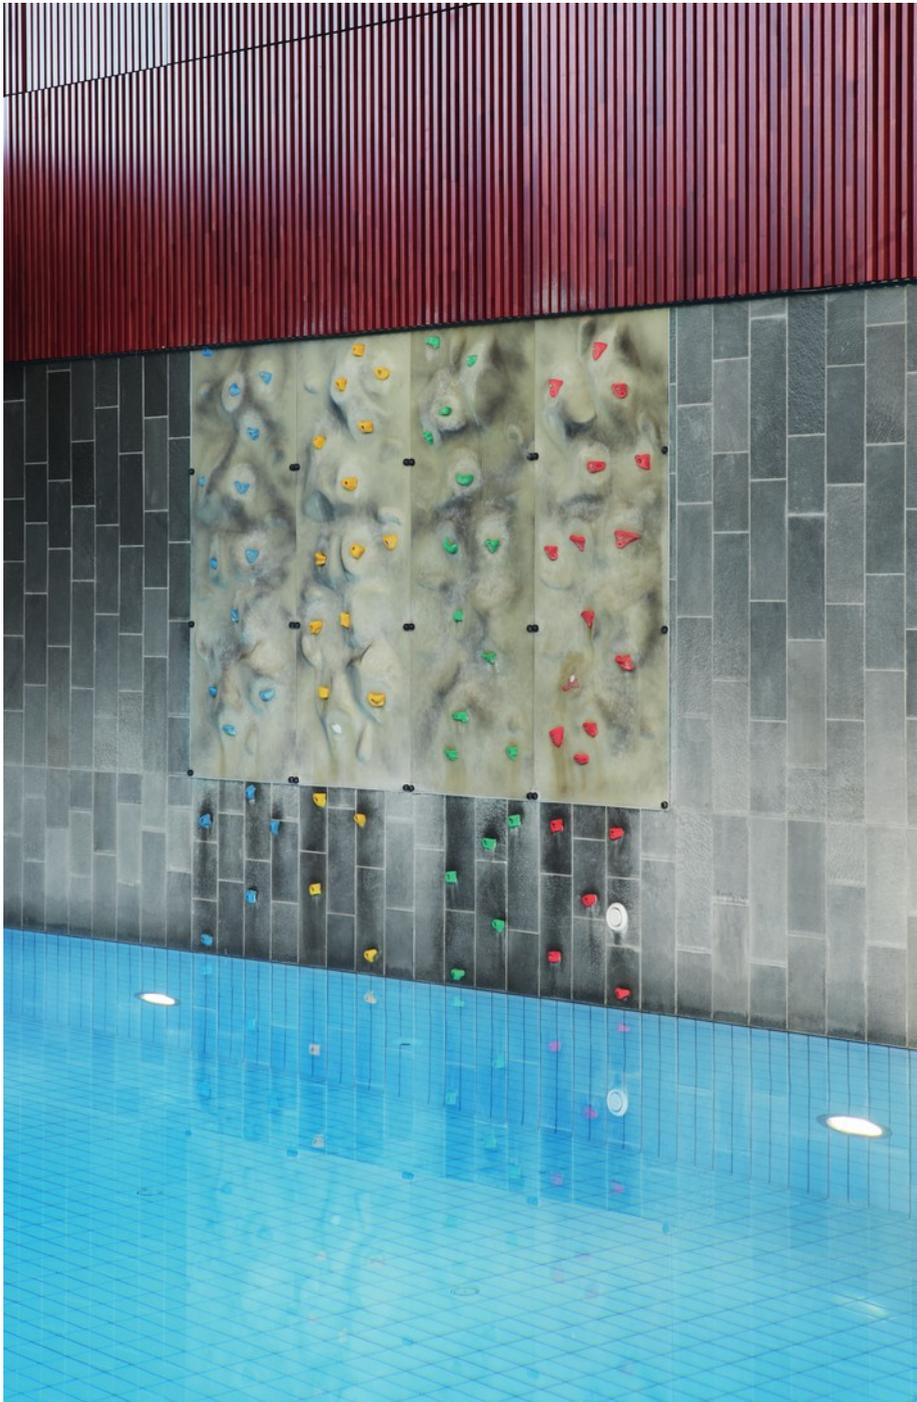

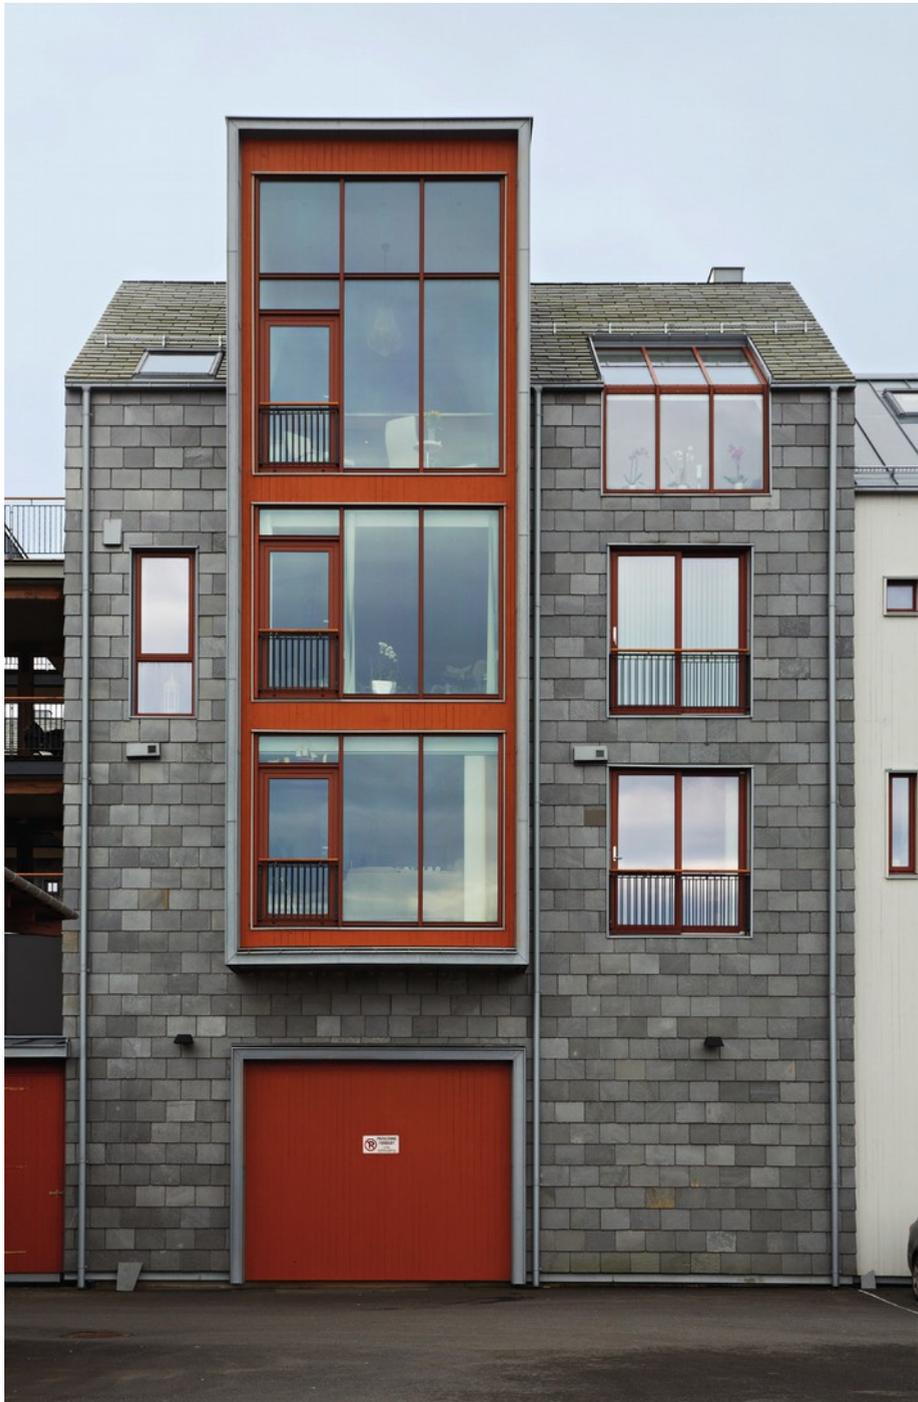

Alta Quartzite has a smooth and comfortable anti-slip surface, which makes it perfect for swimming pools as well as baths and wet rooms.

Nordlysbadet, swimming pool, Alta, Norway

Alta Quartzite reflects the light differently throughout the day and throughout the season, making facades come alive.

Residential building, Bekkjarvik, Norway

Tiles with a natural surface give a solid and rustic impression.

Private home, Moscow, Russia

Children's feet on warm tiles. Your grand mother's. Your mother's. Yours. Alta Quartzite is everlasting and unchanging. But walking barefoot on a warm tile floor, it will never feel like one of the hardest building materials in the world.

Private home, Alta, Norway

This is your place,
if you work you do, rest,
take off your shoes,
happy yourself with the art of being,
that free, that big, that small,
the it, with some things, be you,
take your time, and breathe,
love the moment, when your day
and open your heart,
make up or be busy if you like,
this is your space.

Sense and sensibility. Alta Quartzite is virtually indestructible, but you may as well choose it only because of its looks.

< Private cottage, Alta, Norway

Inside and out, quartzite tiles create a seamless and harmonious totality.

Kilden Theater and Concert Hall,
Kristiansand, Norway

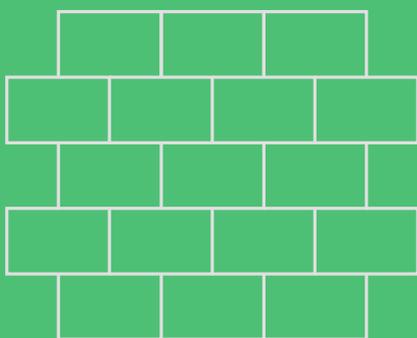

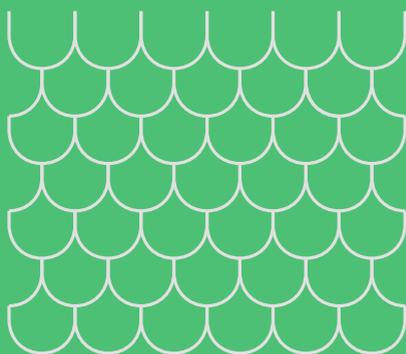

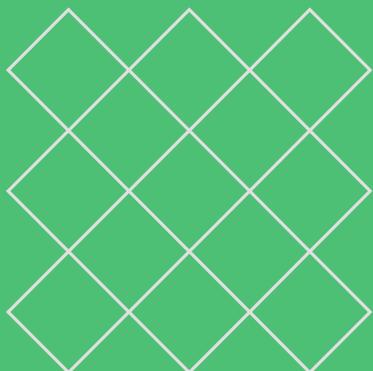

Solid rock, gentle touch

Alta Quartzite has been created during millions of years with extreme temperatures and enormous pressure. It has been exposed to all kinds of weather, and a climate maybe only enjoyed by the people living up here. It has an incredible strength, but it must be handled with skill and care. A light touch with a hammer and chisel is often all it takes.
